

E&I Centre — SEO & Sanity CMS Implementation Checklist

Project: eic-website (www.eicng.com)

Document version: 1.0

Last updated: 27 August 2026

Prepared by: Cursor Cloud Agent

Summary

Status	Count
Done (this session)	18
Remaining (requires your action)	12

A. General site SEO

ID	Task	Status	Notes
A1	Add canonical URLs on all static pages	DONE	Added to index.html and what-we-do.html
A2	Add Open Graph tags (url, image, locale, site_name)	DONE	All static pages
A3	Add Twitter Card meta tags	DONE	summary_large_image on all static pages
A4	Add JSON-LD structured data	DONE	Organization on homepage; WebPage on What We Do
A5	Maintain robots.txt	DONE	Generated at build via scripts/generate-seo-files.js
A6	Dynamic sitemap.xml with lastmod	DONE	Includes /, /what-we-do.html, /blog/; blog posts added when Sanity connected
A7	Create llms.txt for AI crawlers	DONE	Generated at public/llms.txt on each build
A8	Google Search Console verification	REMAINING	Add meta tag from GSC to pages or DNS TXT record
A9	Submit sitemap to Google Search Console	REMAINING	After deploy: submit https://www.eicng.com/sitemap.xml
A10	Bing Webmaster Tools sitemap submit	REMAINING	Optional but recommended

B. Blog / News & Insights (SEO content hub)

ID	Task	Status	Notes
B1	Create /blog/ listing page	DONE	blog/index.html — filter tabs for news, articles, announcements
B2	Blog post detail page template	DONE	Generated as /blog/{slug}.html at build time
B3	Add blog link to main navigation	DONE	Nav + footer on all pages
B4	Blog-specific CSS	DONE	Added to style.css
B5	Blog post filter UI (news / article / announcement)	DONE	blog/blog-filters.js
B6	Homepage “Latest news” teaser section	REMAINING	Recommended for internal linking once posts exist
B7	Publish first 3–5 SEO-targeted articles	REMAINING	Content creation in Sanity Studio
B8	Category landing pages (optional)	REMAINING	e.g. /blog/category/training.html

C. Sanity CMS integration

ID	Task	Status	Notes
C1	Sanity Studio scaffold (/studio)	DONE	Schemas: post, author, category, siteSettings, seo
C2	Blog post schema with SEO fields	DONE	studio/schemas/post.js + objects/seo.js
C3	Sanity read client for build scripts	DONE	lib/sanity-client.js
C4	Build script: fetch posts → HTML pages	DONE	scripts/generate-blog.js
C5	Build script: update sitemap + llms.txt from Sanity	DONE	scripts/generate-seo-files.js
C6	Environment variable template	DONE	.env.example
C7	Studio setup documentation	DONE	studio/README.md
C8	Create Sanity project & add Project ID to .env	REMAINING	See “Connecting Sanity” below
C9	Install studio deps & run editor locally	REMAINING	npm install --prefix studio && npm run studio:dev

C10	Deploy Sanity Studio (optional hosted editor)	REMAINING	<code>npm run studio:deploy</code> → e.g. <code>eic-website.sanity.studio</code>
C11	Sanity webhook → auto-rebuild on publish	REMAINING	Triggers Vercel/Netlify deploy when posts change
C12	CORS origins in Sanity project settings	REMAINING	Add <code>https://www.eicng.com</code> if using client-side preview

D. Build & deployment pipeline

ID	Task	Status	Notes
D1	<code>prebuild</code> runs SEO + blog generation	DONE	<code>npm run generate:all</code>
D2	Vite MPA includes dynamic blog pages	DONE	<code>vite.config.js</code> globs <code>blog/*.html</code>
D3	Track SEO files in git	DONE	Updated <code>.gitignore</code> for <code>public/robots.txt</code> , <code>sitemap.xml</code> , <code>llms.txt</code>
D4	Add <code>SANITY_PROJECT_ID</code> to hosting env vars	REMAINING	Vercel/Netlify project settings
D5	Verify production deploy includes <code>/blog/</code> and <code>/llms.txt</code>	REMAINING	After next deploy

E. Content & SEO strategy (editorial)

ID	Task	Status	Notes
E1	Keyword map for target queries	REMAINING	e.g. “entrepreneurship training Port Harcourt”, “OGTAN training Nigeria”
E2	Editorial calendar (2–4 posts/month)	REMAINING	Mix news + evergreen articles
E3	Unique meta title/description per post in Sanity	REMAINING	Use SEO object on each post
E4	OG image per post (1200×630 recommended)	REMAINING	Upload in Sanity <code>mainImage</code> or <code>seo.ogImage</code>
E5	Internal links from posts to <code>/what-we-do.html</code>	REMAINING	In post body links

Done — files changed this session

File / area	Change
-------------	--------

index.html	Canonical, OG, Twitter, JSON-LD Organization, blog nav link
what-we-do.html	Canonical, OG, Twitter, JSON-LD WebPage, blog nav link
style.css	Blog page styles
package.json	Sanity client, build scripts, md-to-pdf
vite.config.js	Dynamic blog page inputs
.gitignore	Allow tracking SEO public files
.env.example	Sanity env template
lib/site-config.js	Shared site URL and page list
lib/sanity-client.js	Sanity API client + GROQ query
scripts/generate-seo-files.js	robots.txt, sitemap.xml, llms.txt
scripts/generate-blog.js	Blog listing + post HTML generation
blog/index.html	Generated listing (empty state until Sanity connected)
public/robots.txt	Regenerated with sitemap reference
public/sitemap.xml	3 URLs including /blog/
public/llms.txt	AI crawler summary file
studio/	Full Sanity Studio scaffold with schemas

Remaining — your action items

Priority 1 — Connect Sanity (≈15 minutes)

1. Go to sanity.io/manage and create a project named **EIC Website**.
2. Copy the **Project ID**.
3. Create `.env` in the repo root:

```
SANITY_PROJECT_ID=your-project-id-here
SANITY_DATASET=production
```

4. Install and start the studio:

```
npm install --prefix studio
npm run studio:dev
```

5. Create a **Blog Post**, fill SEO fields, and **Publish**.
6. Rebuild the site:

```
npm run build
```

This generates `/blog/your-slug.html` and adds it to the sitemap.

7. Add `SANITY_PROJECT_ID` and `SANITY_DATASET` to your **Vercel/Netlify environment variables** so production builds fetch posts.

Priority 2 — Auto-publish pipeline

1. In Sanity → **API** → **Webhooks**, create a webhook on `post` `create/update/delete`.
2. Point it to your host's **Deploy Hook** URL (Vercel: Settings → Git → Deploy Hooks).
3. Every publish in Sanity triggers a rebuild with fresh blog pages and sitemap.

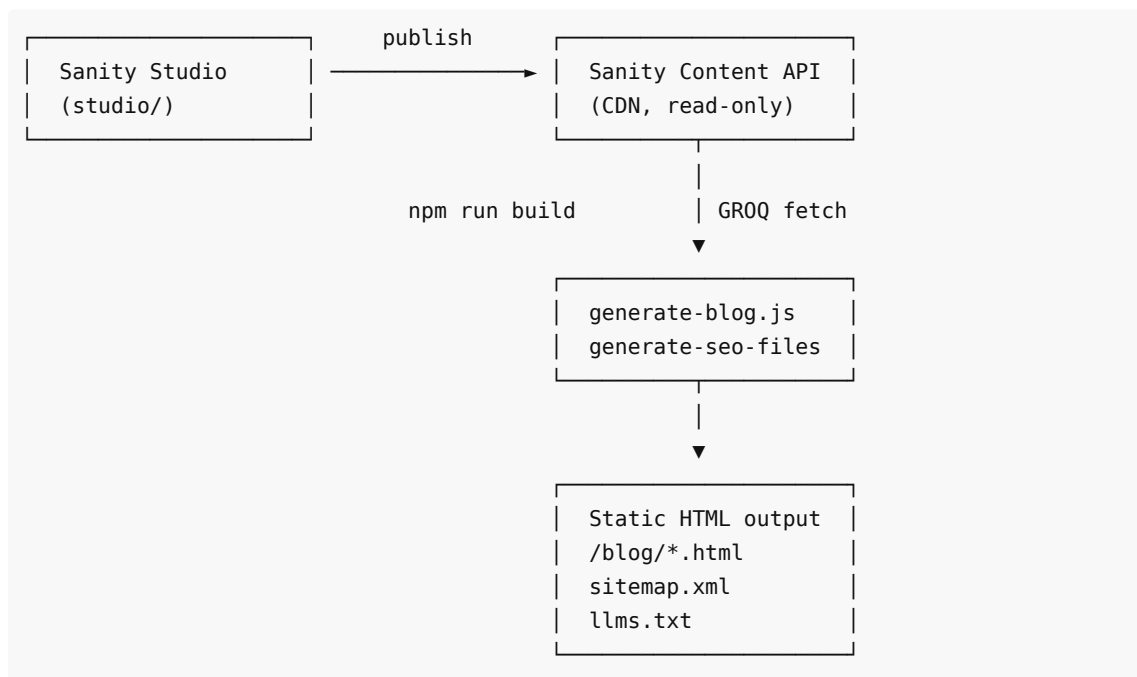

Priority 3 — Search engine registration

1. Verify domain in [Google Search Console](https://search.google.com/search-console/).
2. Submit `https://www.eicng.com/sitemap.xml`.
3. Optionally verify in Bing Webmaster Tools.

Priority 4 — Content

1. Publish 3–5 initial posts (mix of news + evergreen articles).
2. Add a homepage teaser linking to latest posts (can be done in a follow-up PR).

Connecting Sanity — how it works

Yes, Sanity can be connected — the code is ready. You only need:

- A Sanity project ID in `.env` (local) and hosting env vars (production)
- Published posts in the studio

No runtime JavaScript fetches from Sanity in the browser; everything is **pre-rendered at build time** for maximum SEO.

Useful commands

```
npm run dev           # Dev server (auto-generates blog + SEO files)
npm run generate:all   # Regenerate blog pages, sitemap, llms.txt
npm run build          # Full production build
npm run studio:dev     # Open Sanity content editor (after studio npm install)
npm run studio:deploy  # Host studio at *.sanity.studio
```

Questions?

For Sanity setup details see `studio/README.md` .

For environment variables see `.env.example` .
